Senior Software Engineer

S A M E E R G A I K W A D

Email: **sameergaikwad222@gmail.com** | Mobile: **+91 9833285765**
Location: **Kalwa, Thane, Maharashtra**

PROFESSIONAL SUMMARY

Senior Backend Engineer with **8+ years of experience** designing, building, and scaling distributed backend systems using **Node.js, Python, and Golang**. Expertise in **microservices and monolithic architectures**, **distributed systems**, **event-driven architecture**, RESTful APIs, PostgreSQL, MongoDB, RabbitMQ, Kafka, Docker, and cloud-native technologies. Proven experience delivering high-throughput, production-grade solutions for **e-commerce, fintech, and analytics** platforms, including **Generative AI**, **Agentic AI**, and **Customer Data Platform (CDP)** solutions. Strong focus on designing scalable, resilient, secure, and maintainable backend services while optimizing system performance, reliability, and developer productivity through clean architecture and engineering best practices.

EDUCATIONAL QUALIFICATION

Bachelor of Engineering (B.E. Dec 2011), (Mumbai University)

Saraswati College of Engg., Kharghar, Navi Mumbai

TECHNICAL PROFICIENCY

Technologies	:	Microservices Architecture, REST APIs, Distributed Systems, Event-Driven Architecture, Cloud & DevOps (Docker, Kubernetes, AWS), System Design, Monitoring & Logging
Languages	:	JavaScript (Node.js), Golang, Python, Java
Database Environment	:	PostgreSQL, MySQL, MSSQL, MongoDB, Elasticsearch, Chroma DB (Vector DB)
Development Environment	:	Linux (Shell, Cron Jobs), Windows, VS Code, Postman
Version Control Tools	:	Git, Bitbucket, Jira
Build Automation	:	Docker, Kubernetes (Containerization & Orchestration)
Others	:	RabbitMQ, GraphQL, FastAPI, Express.js, Monitoring Tools (Grafana, AWS CloudWatch, DataDog, Graylog), Jira

PROFESSIONAL EXPERIENCE

Senior Developer Engineer
Apexon India | July 2024 – Present

Tech Stack: Node.js, Python, PostgreSQL, Kafka, RabbitMQ, Docker, REST APIs, Microservices, Git

Client: **Tata AIA Life Insurance**

- Developed and maintained Node.js and Python-based microservices for a large-scale insurance platform, owning the **Submission Service**, **Submission Backend Service**, and **Customer Service**.

- Designed RESTful APIs for proposal generation, customer onboarding, and insurance policy processing, integrating customer, banking, and payment workflows.
- Implemented robust validation, verification, and banking integrations while optimizing complex business logic to improve application performance and data accuracy.
- Built event-driven workflows using **Kafka** for policy issuance, compliance management, deviation handling, and customer notifications across distributed microservices.

Client: CD valet, Seattle Bank, US

Tech Stack: Technologies/Tools: Python, FastAPI, Apache Spark, Google BigQuery, Kubernetes, Docker, REST APIs, Linux, Bare Metal Infrastructure, Microservices Architecture, Data Processing & Transformation, Data Integration

- Architected and developed a new **Tracking Backend** service in a hybrid microservices architecture to capture customer journeys, affiliate interactions, and business-critical events for reporting and analytics.
- Designed an end-to-end event tracking pipeline with centralized database logging, integrated **Google Analytics** and **Twilio Segment (Identify, Alias, Track, Group, Page APIs)**, and ensured accurate event mapping and data consistency across analytics platforms.
- Implemented affiliate tracking, JWT-based authentication, email login, and role-based business validations for customers, affiliates, and administrators, while contributing to notification service enhancements.
- Improved analytics reliability by driving the migration from Google Analytics-only tracking to **Segment-powered event collection**, enabling near real-time business insights, streamlined reporting, and accurate commission tracking for affiliate programs.

Senior Consultant

Deloitte India | 03/2024 – 06/2024

Tech Stack: Python, FastAPI, Apache Spark, Google BigQuery, Kubernetes, Docker, REST APIs, Linux, Bare Metal Infrastructure, Microservices Architecture, Data Processing & Transformation, Data Integration

- Developed high-performance RESTful APIs using **Python** and **Fast API** to retrieve and serve logistics data for enterprise applications.
- Integrated backend services with **Apache Spark** to process and expose transformed logistics data sourced from **Google Big Query**, enabling efficient data access and reporting.
- Contributed to the design and implementation of scalable backend components, ensuring reliable API performance and seamless integration with data processing pipelines.
- Assisted in establishing the foundational infrastructure for **bare-metal Kubernetes** environments, supporting containerized application deployment and orchestration.**SDE – 3**

MyGlamm | GoodGlamm Group | 12/2022 – 03/2024

Tech Stack: Node.js (Express.js, Fastify), Golang (Gin), Python, MongoDB, Elasticsearch, RabbitMQ, Docker, OpenAI, Lang Chain, REST APIs, Microservices Architecture

- Designed, developed, and maintained scalable microservices powering e-commerce web and mobile applications.
  - Owned and implemented the **Cart Microservice**, handling cart management, item operations, validations, and checkout-related business logic.
  - Developed and enhanced the **Discount Microservice**, implementing discount rules, coupon validation, promotional campaigns, and pricing logic.
  - Built high-performance backend services using **Node.js (Express.js, Fastify)** and **Golang (Gin)**.
  - Utilized **MongoDB** for data storage and **Elasticsearch** for efficient search and data retrieval capabilities.
  - Implemented asynchronous communication and event-driven workflows using **RabbitMQ**.
  - Containerized applications using **Docker** to ensure consistent deployment across environments.
  - Integrated **OpenAI** and **Lang Chain** to develop AI-powered features and intelligent workflows.
  - Collaborated closely with product managers, frontend engineers, QA teams, and other stakeholders to deliver business-critical features.
  - Participated in system design, code reviews, performance optimization, and production support activities.
  - Ensured scalability, reliability, and maintainability of backend services through microservices best practices.

Senior Technical Associate
AngelOne Pvt Ltd| 02/2021 – 12/2022

Tech Stack: Node.js, Express.js, Python, Shell Scripting, REST APIs, API Gateway, AWS EC2, AWS S3, AWS CloudWatch, Cron Jobs, Log Monitoring, Third-Party API Integrations.

- Developed and maintained backend services for the **KYC module** using **Node.js (Express.js)**, integrating both in-house and third-party APIs to automate customer onboarding and verification workflows.
- Designed and implemented automated **alerting**, **scheduled reporting**, and monitoring solutions using **Node.js**, **Python**, and **Shell scripting**, improving operational efficiency and issue detection.
- Built and integrated secure RESTful APIs through API Gateway, ensuring reliable communication between internal services and external KYC providers.
- Leveraged **AWS services** including **EC2**, **S3**, and **CloudWatch** for application deployment, log management, monitoring, and operational support of production systems.

Software Engineer
Unimoni Enterprize Pvt Ltd| 02/2020 – 09/2020

Tech Stack: Java (JSP/Servlet), MySQL, Oracle SQL, REST APIs, Payment Gateway, Git

- **Client: DirectPay Payment Gateway**
  - Developed and enhanced backend features for the **DirectPay** payment gateway, integrating merchant applications with secure online payment processing services.
  - Collaborated with enterprise merchants, including **Google**, to implement and support payment gateway integrations using in-house and third-party APIs.

- Performed root cause analysis (RCA) and resolved critical transaction issues through detailed log analysis, database investigations, and production hotfix deployments.
- Implemented feature enhancements, database schema changes, and mentored interns on payment gateway integrations, troubleshooting, and backend development best practices.

Application Engineer
IDFC Bank | 01/2019 – 02/2020

Tech Stack: Shell Scripting, Oracle SQL, Linux, Cron Jobs, Jira, Banking Applications

Client: IDFC Bank

- Contributed to the development and maintenance of **TCS Banking** and **Micro ATM (MATM)** applications, delivering change requests and production enhancements for core banking operations.
- Automated banking workflows using **Linux Cron Jobs** and **Shell Scripting** to support End-of-Day (EOD), Beginning-of-Day (BOD), and secure file processing between **NACH** and **Core Banking System (CBS)**.
- Managed application deployments and patch releases across **UAT** and production environments, ensuring system stability and successful production rollouts.
- Performed database operations using **Oracle SQL** and collaborated with cross-functional teams to troubleshoot production issues and support mission-critical banking services.

Application Engineer
Shawman Software| 09/2017 – 09/2018

Tech Stack: JavaScript, Microsoft SQL Server (MSSQL), SQL Profiler, POS Systems

🎬 Contributed to the development and enhancement of the company's Point of Sale (POS) application, implementing feature improvements and resolving production issues.
🎬 Investigated and resolved billing and transaction-related defects using SQL Profiler and Microsoft SQL Server (MSSQL), ensuring accurate and reliable transaction processing.
🎬 Supported End-of-Day (EOD) operations for multiple client deployments, maintaining system stability and operational continuity.
🎬 Developed and optimized application functionality using JavaScript while collaborating with cross-functional teams to deliver product enhancements.

PERSONAL INFORMATION

Date of Birth: **12 December 1988**

Marital Status: **Married**

Languages Known: **English, Hindi, Marathi**

Permanent Address**: Airoli, Navi Mumbai**

DECLARATION

I hereby declare that the information provided above is true to the best of my knowledge.

Sameer Suresh Gaikwad
